

Module 1

1. What are the 3 basic technologies needed to run a website?

Server connected to the World Wide Web, domain name, and web design.

2. What are local files, what are web servers, what is FTP and how are they related?

Local files are web pages, forms, images, and other computer files that is added to a web site. Web servers are a computer connected to a network that keeps your website published, most people copy there site to a different web server because the computer has to always be connected to internet to always be published on the web. FTP is a file transfer protocol; it is for transferring files from your computer to another computer. This is used to send files to a host to post onto the Internet. All of these things are interconnected. You must have the local files to create the website then through FTP you send your website to a web server to be published on the web.

3. What is AFS Space and what does it allow you to do?

This space allow one to upload a website onto Michigan States server. We are each given a website through our MSU net id, but we may not be able to do all the complex functions with this space and our website lies in Michigan States hands.

4. What is the URL for the web space MSU provides for you in your AFS space?

<http://www.msu.edu/~zappitell1>
